**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

(claim 1, line 4) "folding said material by gravity" is vague, indefinite, and/or confusingly worded because it is not clear what applicant is referring to by "gravity"; etc.

***Claim Objections***

Claim 6 is objected to because of the following informalities:

(claim 6, line 2) delete "disk" after "spinning";

(claim 6, line 2) insert --roller—after "spinning".

Appropriate correction is required.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-4 and 10-13 are rejected under 35 U.S.C. 102(a) as being anticipated by Stivani (German Patent 199 05 520).

Art Unit: 3721

Stivani discloses a folding device comprising a primary roller (via 11) for receiving a material (4) to be folded; a primary disk (via 10) in communication with the roller for creasing and folding the material "by gravity" as the material travels from the roller to the disk (Fig. 1); the primary roller and the primary disk are both free spinning (Fig. 1; note that the web been bulled by other rollers via 29, 27, and 22 which cause a spinning of the roller 11 and disk 10).

Regarding claims 2 and 11: the primary roller (11) further comprises a notch (Fig. 1).

Regarding claims 3, 4, and 12: the primary disk is biased to be in contact with the notch and the disk is normal to the primary roller (Fig. 1).

Regarding claim 13: the disk (10) is normal to the primary roller (11).

Regarding claims 10: a feeding roller (via 29) a pair of fold rollers (via 27).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-9 and 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stivani (Germen Patent 199 05 520).

Stivani does not clearly discloses that the primary roller is a drive roller and the primary disk is free spinning disk nor the primary disk is a drive disk and the roller is a free spinning roller nor the feed roller is a drive roller. However, it would have been an obvious matter of design choice to have modified Stivani's folding device by having the primary roller is a drive roller and the primary disk is free spinning disk and/or the primary disk is a drive disk and the

Art Unit: 3721

roller is a free spinning roller and/or the feed roller is a drive roller, since the examiner takes an official notice that the mentioned driving means in either the disk or the roller is old, well known, and available in the art.

Regarding claim 7: the primary roller further comprises a notch (via blade portion 20 on 10).

Regarding claims 8 and 9: Palmer discloses the primary disk is biased to be in contact with the notch and the disk is normal to the primary roller (Fig. 2).
